Automation Audit Checklist

Work through the list before automating anything. Tick a box only when it is genuinely true — the checklist is for you, not for show.

Find the repetition

- [ ] I listed the tasks I repeat at least 3 times a week
- [ ] I noted how long each one takes by hand
- [ ] I ranked them by time spent, not by annoyance
- [ ] I picked the single most repetitive task to automate first

Check the data

- [ ] The task uses data I already have (no new data collection needed)
- [ ] I know where the input lives (inbox, sheet, folder)
- [ ] I know what 'done' looks like for this task
- [ ] Private data (passwords, bank details) is NOT involved

Pick the tool

- [ ] I matched the task to a workflow, script, or template in this kit
- [ ] I checked the setup steps for that tool before starting
- [ ] I ran it once on a copy or a small sample — not on live data
- [ ] I read the output before using it

Make it stick

- [ ] I saved the prompt / script / template where I can find it again
- [ ] I wrote down the 3 steps so I can repeat them without thinking
- [ ] I put a weekly reminder to run it (or set a trigger)
- [ ] I noted the time it took, to compare with doing it by hand

Review monthly

- [ ] I checked which automations I actually still use
- [ ] I deleted or fixed the ones that broke or went stale
